

Best reporting system provider

Regnology

Product/service: Regnology platform

Overview

The Regnology platform is a unified, cloud-native ecosystem that bridges the gap between regulators and the financial institutions they oversee through standardized, automated and data-driven reporting workflows. It is designed to address fragmented oversight, poor data quality and rising compliance costs by enabling standardized, automated reporting. Supporting the full regulatory value chain, the Regnology platform simplifies compliance, enhances data accuracy, and ensures timely, cross-jurisdictional reporting.

Recent goals

- Rconnect, a real-time communication and case management tool enhancing collaboration between regulators and institutions with automation and intelligent insights. Rconnect benefits both financial institutions and regulators.
- Regnology Exception Monitor enables straight-through reporting through a unified dashboard that consolidates all exceptions. It allows users to detect, analyze, and resolve issues early with AI-driven resolution and real-time alerts, streamlining workflows, improving data quality, and ensuring more accurate, timely submissions.

Winning this Waters Rankings award is a powerful validation of our mission to simplify and strengthen regulatory compliance. It reflects the industry's trust in the Regnology platform to deliver unified, data-driven oversight and reporting that meets the evolving needs of both regulators and financial institutions.”
Linda Middleditch, chief product officer, Regnology

The solution

The Regnology platform is designed to address fragmented oversight, inconsistent data and rising compliance costs through three specialized hubs:

- The Regnology Supervisory Hub, which equips regulators and tax authorities with near real-time, data-driven oversight across the full supervisory lifecycle
- The Regnology Reporting Hub, which enables financial institutions to automate and standardize regulatory reporting, improving accuracy and efficiency across jurisdictions
- The Regnology Tax Hub, which centralizes global tax reporting for financial institutions, corporates, and digital service providers, streamlining compliance with diverse regulatory regimes

Product roadmap

Over the next 12 to 18 months, Regnology will expand its commitment to regulatory intelligence and advance its workflow-first platform strategy. Building on a data-driven approach and scalable cloud-native infrastructure, the firm will facilitate the implementation of new regulatory requirements and support automated end-to-end regulatory processes, while strengthening AI-driven monitoring, impact analysis, and exception-based oversight tools. These capabilities are designed to reduce fragmentation, enhance regulatory collaboration, and enable broader and more efficient supervision and compliance.

Differentiators

Regnology offers a unified, cloud-native platform that connects regulators and financial institutions across the full supervisory and reporting lifecycle, integrating RegTech and SupTech within a single ecosystem. The platform supports standardized, automated workflows and real-time oversight. Its modular structure includes shared services such as a granular data model, AI-enabled reporting assistance, and regulatory connectivity tools, enabling consistent compliance across all jurisdictions.
